Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on May 30, 2006 has been entered.

Claim Objections

Claims 27-46 are objected to because of the following informalities: In claim 27, line 5, it is unclear as to what "the opposite end of" is referenced to. Appropriate correction is required.

Claim Rejections - 35 USC § 112

Claims 27-46 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification, as originally filed, fails to disclose an acoustical coupling member within the enclosure and positioned between the source and the liquid medium that converts the primary pulses to composite pulses where the composite pulses each include a non-focused portion and a focused portion. It should be noted that claim 27 only appears to read on the embodiment of figure 7 in that only figure 7 shows an acoustical coupling member positioned between the source and the liquid medium. Figure 7 fails to show composite pressure pulses that propagate substantially parallel to the longitudinal axis of the enclosure and which include a non-focused portion and a focused portion.

Claims 27-46 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 27, it is unclear as to how the composite pulses can propagate substantially parallel to the longitudinal axis of the enclosure and include both a non-focused portion and a focused portion. In claim 29, it is unclear as to

Art Unit: 3737

how the non-focused portion can be convergent towards the longitudinal axis. It appears that only the composite pulses which are focused pulses are convergent toward the axis. The structure set forth in claims 33-34,36-43 is not consistent with an acoustical coupling member within the enclosure and positioned between the source and the liquid medium.

Response to Arguments

Applicant's arguments with respect to claims 27-46 have been considered but are moot in view of the new ground(s) of rejection.
